

# School of Computing, Maths & Digital Technology

## **6G4Z2101: Introduction to Web Design and Development**

---

Introduction to the unit

Introduction to HTML

# What the unit will cover

- Term 1
  - HTML, including new HTML5 structural tags
  - Cascading Style Sheets (CSS)
  - Web standards, usability, accessibility, responsiveness
  - HTML5 video – create custom controls using javascript
  - HTML5 canvas
- Term 2
  - Creating dynamic content using MySQL/PHP
  - Using a portable web server
  - Content Management Systems
- All course materials can be found on Moodle

# Unit delivery

- 1 lecture per week
- 2-hour workshop per week
  
- Lectures
  - Term 1 – Marie Carroll and Peter McKenna
  - Term 2 – Bob Cherry

# This term's workshops

- Workshops will be a combination of:
  - Guided exercises
  - Try it on your own
  - Supporting materials e.g. Lynda.com
  - You will code in **Notepad++**, or other text editor
  
- After the workshop
  - Practice in your own time to become more familiar with the material – set yourself challenges
  - Work on the appropriate part of the assignment

# Self-directed study

- Total unit effort should be 300 hours
- Contact hours -  $3 \times 24 = 72$
- Self-directed study should be around 5 hours per week
- Lectures and labs cannot teach you everything you need to know; you need to read around your subjects

# Assessment

- Term 1 – portfolio (50%)
  - Create an e-portfolio website, styled with an external style sheet
  - Javascript-based tasks (HTML5 video and canvas)
- Term 2 – portfolio (50%)
  - MySQL/PHP development and Moodle-based quiz
- This term's assessment will be available next week, so you can work through it systematically as you cover relevant content week-by-week

# The World Wide Web – the history [1]

- Invented in 1989 by Tim Berners-Lee, a British computer scientist at CERN
- The Internet was developing, and hypertext was an emerging technology
- October 1990 – Berners-Lee had written the three fundamental technologies
  - HTML (Hypertext Mark-up Language)
  - URI (Uniform Resource Identifier) – unique addresses for resources
  - HTTP (Hypertext Transfer Protocol)

## The World Wide Web – the history [2]

- 6 August 1991 – [first website](#) went live
- 1992 – First web server outside of Europe built at Stanford University
- 1993 – Web protocols and code released as open source
- 1994 – Telecommunications companies started to provide internet access in the home

# HTML and CSS

- HTML and CSS are the basic building blocks of any web page
- HTML documents define the **content** and **structure** of the page
- Style Sheets define the **layout** and **presentation**
- Stylesheets revolutionised web design
  - Use '[The WayBack Machine](#)' to see how web design has evolved over time

# What is HTML?

- HyperText Markup Language
- A **markup** language that describes web pages
- Tells a browser how a web page is structured (e.g. defines headings and their levels, paragraphs, etc)
- Tags are (normally) in pairs e.g. `<html> </html>`
- HTML pages are saved with the file extension `.htm` (or `.html`)
- Home page often called `index.htm` / `index.html`
  - Typing `www.mmu.ac.uk/` actually sends you to `www.mmu.ac.uk/index.htm`

# Basic tags

- All html pages include the same set of basic tags

`<!DOCTYPE html>`

Doctype declaration

`<html>`

Opens the html document

`<head>`

`<head>` content is largely non-visible in the web page

`<title>My web page</title>`

`<title>` content appears at the top of the browser window

`</head>`

`<body>`

`<h1>This is the top level heading</h1>`

`<h2>This is a second level heading</h2>`

`<p>This is a paragraph.</p>`

`</body>`

`</html>`

Content within `<body></body>` tags is the visible content of the web page

## Paragraphs and Headings

- Most text will be tagged either as a paragraph `<p>`  
`</p>`, or a heading `<h?>` `</h?>`
- Browsers apply some default styling if there is no stylesheet
- Headings of different levels use `<h1>` to `<h6>`
- Tags help to define structure e.g. heading levels should reflect the importance of each heading

# School of Computing, Maths & Digital Technology

## 6G4Z2101: Introduction to Web Design and Development

```

## 6G4Z2101: Introduction to Web Design and Development

### Site navigation

- [Galleries \*explore our photos\*](#)
- [Gear \*our favorite equipment\*](#)
- [Interact \*contact, follow, or submit your own\*](#)
- [Shop \*buy our stuff!\*](#)

### We love urban photography

We're betting you do too. Welcome to our site, a growing collection of

#### Welcome to Desolve

So what is Desolve? The short answer is that it comes from the combination of design and evolve. A slightly longer version is that we're a collection of photographers, designers, and creatives who enjoy urban photography. During our travels around the country, we take time to document the cities we love. You'll also occasionally find articles on design, our thoughts on the latest trends, and the odd posting on photography.

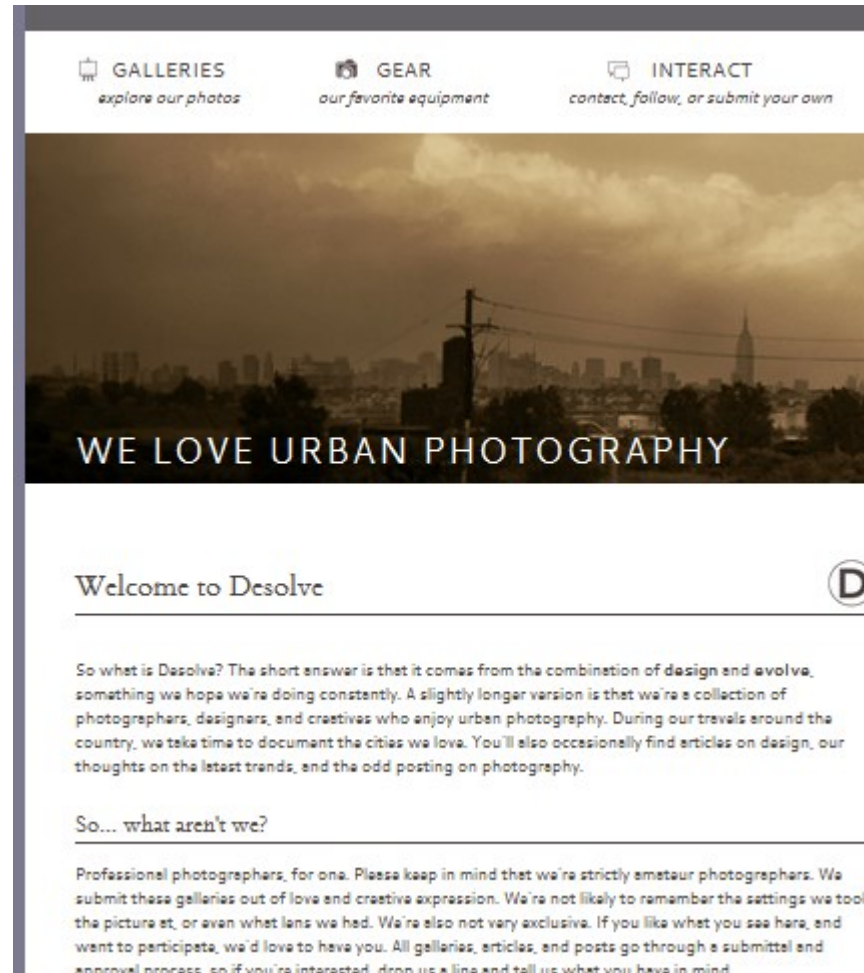

#### So... what aren't we?

Professional photographers, for one. Please keep in mind that we're strictly amateur photographers. We submit these galleries out of love and creative expression. We're not likely to remember the settings we took the pictures at, or even what lens we had. We're also not very exclusive. If you like what you see here, and want to participate, we'd love to have you. All galleries, articles, and posts go through a submittal and approval process, so if you're interested, drop us a line and tell us what you have in mind.

### Upcoming cities

Want to be a part of a Desolve.org meetup? Check out our upcoming cities

**HTML document without  
stylesheet attached, using only  
the browser's default styles**

**HTML document with stylesheet  
attached**

# Hyperlinks

- Hyperlinks are what make the Web a hypermedia system
- Links can be **internal** or **external**
- Links include 3 parts:
  - The **anchor tag** `<a href> ..... </a>`
  - The **url** of the page you are linking to
  - The **link text** that appears in the web page
- `<a href="http://www.bbc.co.uk">Go to the BBC home page</a>`
- `<a href="contact.htm">How to contact us</a>`
- URL = Uniform/Universal Resource Locator

## HTML images

- Images are added using the `<img>` tag
- `src` = source – an **attribute** of the `<img>` tag
- The image size is generally specified within the tag

```

```

Tells the  
browser to  
display an  
image

Image  
filename

Image size in pixels

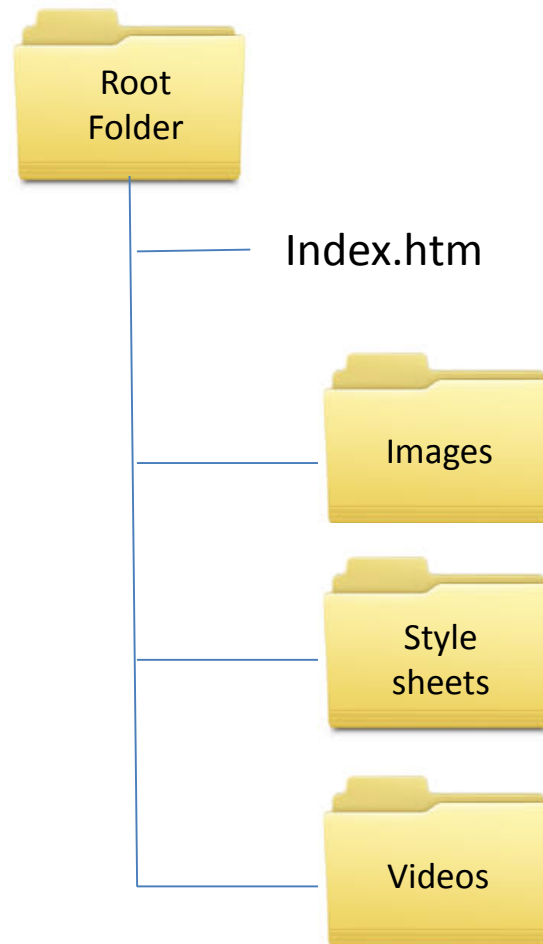

- You will need to add a pathname if your images are stored in a different folder to the html page

```

```

# Website file structure

HTML pages go in the root folder, and other content goes in sub-folders

Sub-folders will depend on site content

# Elements and Attributes

- An HTML **element** is everything from a start tag to an end tag, including the tags themselves

- Many HTML elements can have **attributes**, which give additional information (e.g. image source, height and width)
- Attribute values appear in speech marks

``

- Some HTML elements can be empty, such as the break tag `<br>`

## HTML Lists

- Lists can be ordered <ol> or unordered <ul>
- Each list item is enclosed within <li> </li> tags
- Now commonly used for creating navigation menus, through CSS styling

```
<ul>  
<li>List item 1 </li>  
<li>List item 2 </li>  
<li>List item 3 </li>  
</ul>
```

- List item 1
- List item 2
- List item 3

```
<ol>  
<li>List item 1 </li>  
<li>List item 2 </li>  
<li>List item 3 </li>  
</ol>
```

1. List item 1
2. List item 2
3. List item 3

## Nested lists

- Lists can be nested, to create sub-lists

```
<ol>  
  <li>List item 1  
    <ul>  
      <li>sublist item</li>  
      <li>sublist item</li>  
      <li>sublist item</li>  
    </ul>  
  </li>  
  <li>List item 2  
    <ol type="i">  
      <li>sublist item</li>  
      <li>sublist item</li>  
      <li>sublist item</li>  
    </ol>  
  </li>  
</ol>
```

Open ordered (i.e. numbered) list

First numbered list item

Open unordered list, inside the first numbered item

1. List item 1
  - sublist item
  - sublist item
  - sublist item
2. List item 2
  - i. sublist item
  - ii. sublist item
  - iii. sublist item

## HTML tables

- Use the `<table>` `</table>` tags
- Tables are made up of rows `<tr>` and cells `<td>`

Uses 'colspan'

Name	Hobby	
John	Football	Reading

Uses 'rowspan'

Name	John
Hobby	Football
	Reading

```
<table border="1">
```

```
<tr>
```

```
<td>cell 1</td>
```

```
<td>cell 2</td>
```

```
<td>cell 3</td>
```

```
</tr>
```

```
<tr>
```

```
<td>cell 1</td>
```

```
<td>cell 1</td>
```

```
<td>cell 1</td>
```

```
</tr>
```

```
</table>
```

'border' is an attribute of the 'table' element

cell 1	cell 2	cell 3
cell 4	cell 5	cell 6

# New tags in HTML5

- HTML5 has introduced a range of new semantic structural tags
  - <nav>
  - <header> and <footer>
  - <main>, <article>, <section>, <aside>
  - and more
- **Semantic** or **Structural** elements
- Supported by new browsers
- Some lack of clarity in how some of the new tags are to be used (especially <article> and <section>)

# Web Standards

- Web standards are recommendations from the World Wide Web Consortium (W3C)
- When new tags become full W3C Standard, all browsers should understand them e.g. CSS3 and HTML5 tags
- One of the W3C's recommendations is to separate content (HTML) from presentation (CSS)
- [The Web Standards Project](#)  
“... the Web needs guidance to realize its full potential. Web standards are this guidance.”

## W3C and W3Schools

- W3C – Lots of information about web standards and the status of new recommendations
- W3Schools has free tutorials for many areas of web design
  - Teaches how to code according to Web Standards
- <http://www.w3.org/>
- [www.w3schools.com](http://www.w3schools.com)

<http://www.lynda.com/>

- Paid-for tutorial site available free to MMU students

## Summary

- The World Wide Web is still uses the same basic technologies as when originally invented
- HTML is the first building-block of a web site, being the language in which all web pages are created
- HTML tags define the structure of a page
- HTML is an evolving language, with HTML5 having introduced a range of new tags
- Web Standards aim to bring a level of consistency to web development
